If several team members actually work on the same feature, indicate on which part of the feature each team member actually worked (e.g., user interface, controller, persistence, ....).

Was the work as stated in Column D distributed evenly among team members:

YES

If not, explain why:

We continued using VSCode Liveshare allowing us to edit the same file at the same time on different computers. All said changes are considered edited by the host of the Liveshare session and are pushed from the host's computer, which may account for the difference in commits/line changes. The teams acknowledges that all members have contributed to their parts as they should have.
